

Media Kit

The AI build studio, unlocked by the VibeBuilders Discord. Describe it.
The Maestro builds it. You ship it.

vibemaestro.app · discord.osintnet.uk

Conduct the code.

What VibeMaestro is

VibeMaestro is an AI build studio unlocked by the VibeBuilders Discord community. You sign in with Discord, describe what you want in plain language, and the Maestro proposes a stack, writes real code, and publishes your app to its own live subdomain. It acts, you approve.

Access and rank are earned by shipping, not bought. The whole ethos in four words: ship it or it didn't exist.

1 · DESCRIBE

Sign in with Discord and tell the Maestro what you want — a page, a tool, a whole app. Plain language is enough.

2 · CONDUCT

It proposes a decisive stack, scaffolds the project, and writes real code. Refine by talking back. It acts, you approve.

3 · SHIP

Preview live, then publish to your own vibemaestro.app subdomain in one click. Your project, your URL.

The gate & the two tiers

THE GATE

VibeMaestro is open exclusively to members of the VibeBuilders Discord. Join the community, then sign in with Discord. That's the whole gate — free, full platform.

■ Capy — FREE

- › Full-stack builds: DB, auth, storage & email wired for you
- › Smart model routing — auto-picks the best free model
- › Live preview → 1-click publish to your own subdomain
- › Deep-Dive research grounding on every build
- › A generous daily cap — enough to ship real apps

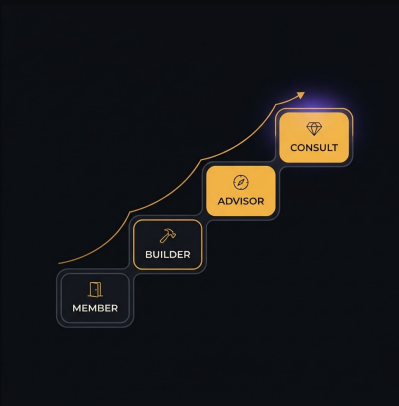

■ Lightning — PREMIUM

- › Everything in Free, plus Atlas frontier reasoning
- › Massive context — whole codebases in one build
- › Make your own Capy — custom agents with skills
- › Connect anything: MCP, encrypted vault, skill packs
- › Higher caps, priority reasoning & full model picker

Every account includes — free or premium

Managed database, auth, file storage & email (zero setup) · 1-click publish to a live subdomain · GitHub sync, live preview & instant rollbacks · Deep-Dive research grounding · Vibe your whole workspace by chat. You never pick a model or wire a backend; the studio does it for you.

Earn your place

MEMBER

Join the Discord, sign in, ship your first working app. You're in — full platform, free. ■ First-Ship badge.

BUILDER

Keep shipping and start helping others. Earn a badge for every milestone; climb the ranks; show on /ships.

VIBE ADVISOR

Consistent shippers + helpers earn the Advisor badge and a custom vibeadvisors.ai handle.

VIBE CONSULT

Top advisors level up to a vibeconsult.ai home, a working @vibeconsult.ai email forward, and the ability to earn \$\$ mentoring other builders.

Real engine: the Axiom bot logs every /ship to a database and tracks each member's ship count — badges are the honest layer on top of that live counter. The event is the message: access is earned.

Meet Axiom

Axiom is the VibeBuilders Discord's resident AI super agent — Claude on Cloudflare's edge, built by VPDLNY. It greets every arrival, helps you build, debug and ship, and keeps the community's ship log. Its voice: a 10-year senior edge engineer who ships — celebrates builders, zero patience for talk-only.

Builder commands

`/vibe` — AI + tech pulse · `/build [idea]` — full build plan · `/debug [problem]` · `/stack [use case]` · `/ship [project]` — launch checklist + logs your ship · `/ask [anything]` · `/roast [thing]` — brutally honest critique

Server commands

`/ships` — top-shippers leaderboard · `/guildinfo` — server stats · `/userinfo [@user]` — profile + badges

Welcome DM

“AXIOM detected your arrival in VibeBuilders. Run `/help` to see what I can do. One rule: ship or it didn't happen.”

The Vibe Jam + press

VIBEBUILDERS JAM

LABOR DAY WEEKEND · SEP 4-6

BUILD IT. SHIP IT. WIN.

The VibeBuilders Jam

A Discord-native vibe-coding hackathon — Labor Day weekend, Sep 4–6, 2026. Build & ship a working app inside the studio during the jam window. Ship anything → a month of Premium. Top 3 → judged prizes + the Jam Winner laurel. Judged on Innovation · Execution · Platform use · Polish.

Boilerplate

VibeMaestro is an AI build studio, unlocked by the VibeBuilders Discord community. You sign in with Discord, describe what you want in plain language, and the Maestro proposes a stack, writes real code, and publishes your app to its own live subdomain — it acts, you approve. Every account ships full-stack apps with managed database, auth, storage and email wired for you. Access and rank are earned by shipping: member → builder → advisor → consult, where top builders earn by mentoring. Ship it or it didn't exist.
